OPERATING SAFETY CIRCULAR No.12/25

Sub: Action by SMs in case of Point indication flashing-Reg.

During recent inspections by Officers, it is observed that whenever there is point failure or point indication flashing when point is operated, SMs are informing S&T officials and waiting for the failure rectification, but not taking immediate action as per G&SR.

As per SCR G&SR2020, Appendix XI- Interlocking:

Para 6(ii). Abnormal circumstances and failures:

a) Point indication flashing when point is operated.

- 1) If the flashing continues for 10 seconds, restore the points to normal position. Try to operate points 4 or 5 times from N to R and R to N,
- 2) If the flashing still continues, physically verify the points at site and remove any obstruction in the points between the switch and stock rails,
- 3) Again operate the points, and
- 4) If the flashing still continues, treat the points as defective and call for ESM/SI. In the meanwhile, use crank handle to set points and pilot the trains.

All TIs/SMRs to counsel the staff in this regard and ensure strict compliance.
